C. Aburi

### DESIGN & BUILD:

C. Aburi Nig. Ltd

### CONSULTANTS:

Lobcom Associates  
Engineering (LAE)

“I’ve been looking for a pipe that will give me peace of mind even after installation. One that will not require a cumbersome installation process and yet of very high quality. That was why once I saw FlowGuard CPVC, I was very elated and have also recommended the pipe to my clients both in the FCT and other parts of the federation. I will boldly recommend FlowGuard CPVC to anyone that is after peace of mind. Think FlowGuard CPVC, Think Peace of Mind”

Mr. Ibewuba Chidozie,  
Chief Plumber

## ABURI HOUSE

### Project Overview

Construction is underway on a new residential building at Dawaki in the Federal Capital Territory Abuja. 15 one bedroom flats will make up this new residential unit in the nation’s capital

### Challenges

Property in this area is highly sought after and has a reputation for quality buildings. The main challenge is to ensure that this new apartment building lives up to the standard of quality in the area. This must be reflected in the specification of building materials, plumbing included.

### Why FlowGuard® CPVC?

From the installation perspective, FlowGuard CPVC was a popular choice for its fast, safe and quick installation process. It does not require heat tools, automatically eliminating the risk of occupational hazards such as electrocution or burns. As for the pipework itself, it can be installed in confined areas safely thanks to its strength and pressure bearing capabilities.

The pipe material lives up to the expectation of quality, as it is unaffected by chlorine in treated water, eliminating this common erosion risk and allowing safe distribution of both hot and cold water. Both the pipe’s quality and affordability attracted installers to choose FlowGuard CPVC.
